

AGVANTAGE

2022 SMART WATER PACKAGES

*American Integration: Combining American Implement's topnotch support and knowledge to outside precision ag technology resources. You're bombarded with third-party technology companies promising to deliver but we've done the hard part... research and time spent with various companies and only stand behind the ones that we know will make a positive impact for your operation. That's what we call **American Integration**. Only John Deere seamlessly connects people, equipment, and technology to give you an advantage.... and only American Implement with American Integration provides you with the most powerful farming tools from AquaSpy and Ceres. We are now offering custom packages tailored to fit your needs:*

The AquaSpy Moisture Monitoring Probe allows the grower to use data to make input decisions every minute of every day. The probe looks at root behavior and how it interacts in its environment. AquaSpy monitors subtle details and has the world's largest repository of underground plant health statistics that translate into user-friendly and intuitive solutions that impact yield. AquaSpy informs the grower exactly how crops are doing 48 inches below ground.

Ceres Imaging makes high-quality aerial imagery and powerful analytics tools accessible to cost-conscious growers—with plans built to suit your crop, your acreage, and your management goals. Ceres Imaging delivers irrigation management solutions that help you improve profitability across your operation. High-resolution multispectral imagery is only the beginning. Analytic tools help you interpret your data—translating what you can see in your imagery into what you can do about it.
